SUBJECT: Ford Motor Company - A. L. Taylor Site

The solvents recovered from Ford Motor Company drums at the A. L. Taylor site was transported by Liquid Processors, Inc. to the M & M Chemical Company located in Alabama. When Liquid Processors decided to take the solvents to this facility, and prior to it leaving the Taylor site, I contacted the Alabama Department of Public Health, Division of Solid Waste & Vector Control. (Note my memorandum dated August 18, 1980.) The attached letter was requested during our conversation to document that Alabama had no objections to Liquid Processors transporting the solvent material to the M & M Chemical Company.
